

Are your firefighters' protective clothing organized and ready for immediate response? Want a better way?

Airport Professional Services, LLC
introduces

Turnout Trees (TOTs) PATENT PENDING

Before

Typical scene at some fire departments with protective clothing lying on the floor

Is this the way your department treats these life saving assets?

Protective clothing piled on the floor decreases response time and clothing lifespan

We wouldn't treat our personal \$200 suit like this. Why then treat \$2,300 worth of protective clothing this way?

After

- ✓ Protective emergency-response clothing organized high and dry on the TOTs
- ✓ TOTs allow for expedient donning and quick departure
- ✓ Expensive protective clothing has a longer life span because of TOTs
- ✓ TOTs pay for themselves by adding longer life to the turnouts
- ✓ TOTs adjustable height grab bar permits fire fighters to balance themselves while donning boots
